

## **Doble Engineering Company Launches New Web Site!**

**November 1, 2005, Watertown, MA , USA**–Doble Engineering is excited to announce the debut of a totally redesigned Doble web site. The new site's fresh look offers improved information on Doble's product and services, search capability and a single-sign in to access the Doble Portal, Knowledgebase and event registration. Current Doble Service and Equipment Agreement clients can use their existing log-in name and password from the old site to access secure sections of the new web site.

The new web site's search functionality gives visitors the ability to search the site for product and services information, software updates and downloads, events, and company related news. With the new search functionality and single-sign in, the usability of web site is greatly increased.

Doble's new site includes a company news section, back issues of the Doble Exchange Newsletter and a number of available technical papers on industry related topics. One of the goals of the new site is to offer current information on topics that are important to the electric power industry.

The new web site can be accessed at Doble's current web address, [www.doble.com](http://www.doble.com).

### **About Doble**

Doble Engineering has been serving the electric power industry by providing diagnostic instruments, services and knowledge for 85 years. The company also maintains the industry's most extensive resource library of apparatus test results and knowledge. Doble has close working relationships with energy generation and delivery companies, as well as industrial power users, working in partnership to improve the performance of their systems and operations. For more information visit the company's web site at [www.doble.com](http://www.doble.com).
