DOBLE PROTECTION TESTING

PowerBase Lite

Protection Suite Database

A MANAGEMENT TOOL FOR DOBLE PROTECTION SUITE AND F-SERIES INSTRUMENTS

PowerBase Lite (PB Lite) is a test plan and results management database for Protection Suite that also tracks Doble Power System Simulator equipment information.

The PB Lite database resides on a network server. Protection Suite Professional license users exchange PSX files securely with simple upload/download operations. Administrator license users review all the data contained within the PSX files from one central location.

PB Lite consolidates test records for improved compliance management, offering supervisors control of re-test intervals and other basic work details in addition to test and equipment information tracking.

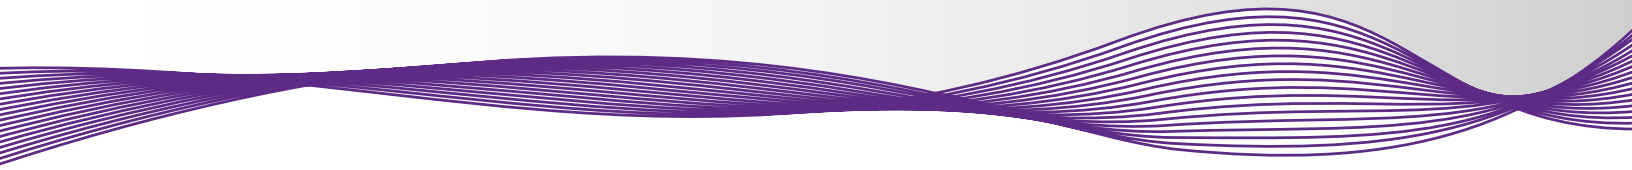

PROTECTION SUITE PROFESSIONAL users perform PSX file upload/download operations with the PB Lite database through their company's network.
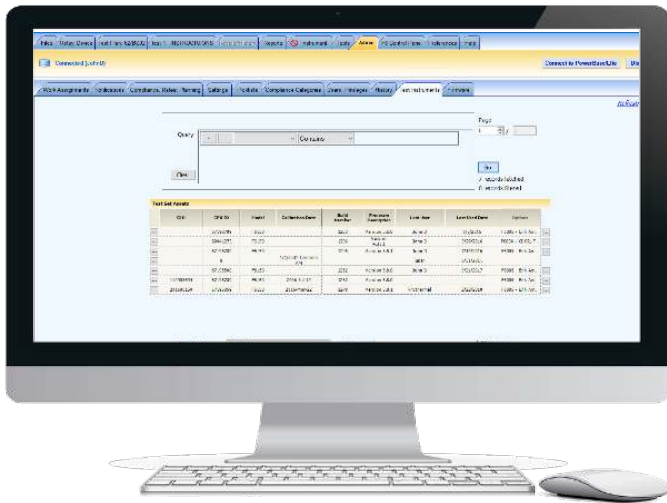

Administrators use the PB Lite database to maintain:

- Asset Nameplate
- Instrument Firmware
- Work Notices
- Test Plans
- Test Results

www.doble.com

Track test instrument information (firmware, calibration, options, etc.)

Select which relays need testing

Assign relays to technicians

PB Lite Highlights

- Efficient test plan approval and distribution by administrators
- Straightforward test result uploads by testers
- Secured exchanges and process consistency
- Configurable user privileges definable by region, group or other criteria
- Work assignments: supervisors simply select the device and assign a worker for completion. All assignments are tracked, keeping stakeholders informed and up-to-date of the status.
- Queryable file storage with ability to review settings and other critical test information

License Details

PB Lite is available as an upgrade of Protection Suite Professional licenses. Unlimited Protection Suite Professional users can use PB Lite.

PB Lite licensing is scaled by the quantity of PB Lite Administrator seats. One Administrator seat is included. Additional Administrator seats are available for purchase. The PB Lite upgrade affects annual Protection Suite maintenance and support renewal costs.

PowerBase Lite can be converted to ENOSERV PowerBase through professional services provided by Doble.
